

Cardiac Intensive Care

General

This unit was rebuilt in 2006. The Intensive Care Unit has six patient beds in six separate, well-equipped rooms. The Intermediate Care unit has six rooms with two beds per room, bringing the total number of beds in the unit to eighteen.

Patients hospitalized in this unit include:

- Patients with a serious blockage in the heart muscle. These patients arrive in the Magen David Adom mobile ICU or from the Emergency Room, and are transferred directly to the coronary angioplasty room. Patients who do not need angioplasty are transferred to the ICU for observation.
